NON-CAKING SODIUM CHLORIDE CONTG FERRIC ACETATE...

NEW

Process for reducing the agglomeration of NaCl by adding a small amount of Fe acetate to salt crystals, pref. in a proportion of 1/50000.

ADVANTAGE

Caking of salt during storage is thus prevented by use of harmless, edible materials.

DETAILS

The Fe acetate may be obtained by dissolving a colloidal soln of Fe(OH)<sub>3</sub> in vinegar.
